IDEA 0187-69
Copy 4 of 5

MEMORANDUM FOR: Sensor Systems Division, OSA
SUBJECT: IRIS II Operation and Flight Manual
REFERENCE: IRIS II Operation and Flight Manual

1. Referenced manual covers the operational aspects of the IRIS II in good detail, however, the following suggestions are submitted:

a. Believe that some reference should be made to length of film rolls other than 10,500 feet that can be provided.

b. Reference, page 8 - 6, figure 8 - 4. Recommend a larger chart with additional mileage and feet of film ticks for more refined determination of film to be expended on a mission. This would particularly apply on shorter missions if smaller rolls of film can be used.

c. If the camera settings given in manual are now confirmed, PHD 50-10-28 should be corrected to provide IRIS II camera settings to all concerned. This should include film type(s), switch position(s) and filter application(s) plus applicable instructions when the f/5 aperture stop is required.

2. Recommend an IRIS II briefing be provided in the near future for all concerned operations personnel.
